

My Boss v5 — High-Level Design (HLD)

Simple overall view of the system.

1. What is it?

My Boss is an Orange employee initiative platform. Employees form **squads**, run field activities, collect **surveys**, and upload photos. **Admins** manage users, settings, surveys, and export reports to **Power BI**.

2. Big picture

Survey Service → Power BI (CSV / JSON export)

3. Main parts

Layer	Technology	Who uses it
Mobile app	Flutter (Android)	Employees
Admin portal	React + Vite	Admins
Backend	NestJS (5 microservices)	Both apps
Database	MySQL	All backend services
Analytics	CSV/JSON export APIs	Power BI / Admin

4. Backend services

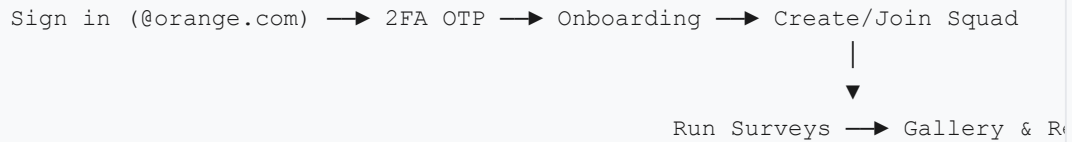

Service	Main job
Auth	Login, 2FA OTP, JWT tokens
User	Employee profiles and accounts
Config	Squad limits, buildings, app settings
Squad	Create/join squads, members, leaders
Survey	Surveys, responses, gallery, reports, Power BI export

5. MySQL – what is stored

Domain	Examples
Auth	Users, OTP sessions, refresh tokens
Users	Employee profiles, roles
Config	Max squad size, survey targets, buildings
Squads	Squads, members, join requests
Surveys	Survey schemas, responses, gallery, analytics

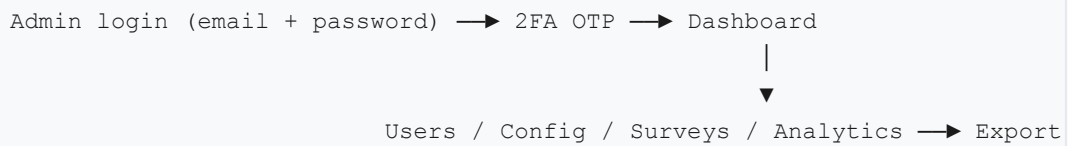

Note: Demo environment may use in-memory data for quick testing. **MyS**

6. Employee flow (Mobile)

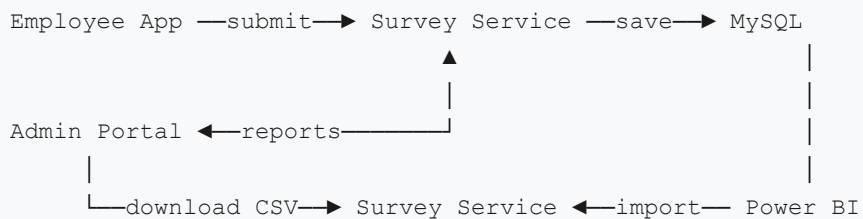

Main screens: Sign in → OTP → Home → My Squad → Surveys → Gallery → Profile

7. Admin flow (Web)

Main pages: Dashboard, Users, Configuration, Surveys, Analytics

8. Survey data flow

9. Security (high level)

Role	Authentication
Employee	@orange.com email + OTP
Admin	Email + password + OTP
API	JWT bearer token on requests

10. Deployment view (development)

Developer Machine

```
├─ Backend Services → MySQL
├─ Android Emulator → Backend Services
└─ Admin Portal (Browser) → Backend Services
```

11. One-line summary

Flutter mobile app for employees + React admin portal + NestJS microservices
